PROFILE

I'm an IT graduate from the Technological University of the Philippines – Manila with a passion for building web applications. I specialize in full-stack development using Laravel, Vue.js, and Tailwind CSS, and have hands-on experience with no-code platforms like WeWeb and Xano. I'm also comfortable working with databases — whether through a framework's query tools or writing raw SQL when needed. I take pride in delivering clean, scalable, and maintainable solutions that meet both technical and business requirements.

EDUCATIONAL BACKGROUND

Bachelor of Science in Information Technology

Technological University of the Philippines – Manila

2019 – 2023

Technical Vocational – Information, Communication, and Technology

Metropolitan Medical Center – College of Arts, Science, and Technology

2017 – 2019

Junior High School

Tondo High School

2013 – 2017

TECHNICAL SKILLS

Core Web Technologies: Proficient in HTML5, CSS3, and JavaScript for building engaging and responsive web interfaces

Frontend Frameworks: Experienced with Vue.js for building dynamic and reactive user interfaces

Backend Development: Skilled in Laravel and Node.js for server-side development, including RESTful API creation and database management

Styling Frameworks: Familiar with Tailwind CSS for implementing modern and responsive designs efficiently

Database Management: Proficient in MySQL, focusing on efficient data storage, retrieval, and query optimization

No-Code Development: Experienced with WeWeb and Xano for rapidly building and deploying full-stack applications without traditional coding overhead

Version Control: Experienced with Git for tracking changes and collaborating on projects effectively

Development Environment: Familiar with WAMP for setting up local development environments

WORK EXPERIENCE

ClientBase Pte. Ltd.

Full Stack Web Developer – Full Time (Remote)

No. 72 Circular Road #03-01, 049426, Singapore

November 2024 – Present

- Developed and deployed a full-stack application using no-code platforms WeWeb and Xano, handling both frontend and backend implementation
- Migrated the no-code application to Laravel and Vue.js, improving flexibility, scalability, and long-term maintainability
- Managed version control using Git to track application changes and maintain code integrity

Optimum Exchange Remit Inc.

Junior Full Stack Web Developer – Project Based

3rd Worldwide Corporate Center, Shaw Blvd, Mandaluyong, 1550 Metro Manila

August 2023 – October 2024

- Collaborated on the development and successful launch of two web-based applications using Laravel and Vue.js
- Managed RESTful APIs and optimized database interactions, improving overall application performance and user experience

- Implemented responsive UI components using Tailwind CSS, ensuring cross-device compatibility and a consistent user interface

Globalland Property Management Inc.

Junior Web Developer – Intern

Harvard St GlobalSpaces, Mezzanine Floor Starmall EDSA, cor. Shaw Blvd, Mandaluyong, 1552 Metro Manila

March 2023 – July 2023

- Assisted in developing a web-based application using Laravel and Vue.js, with a focus on back-end development using Node.js
- Contributed to code reviews and debugging sessions, helping improve code quality and overall application performance

RELEVANT PROJECTS

Work Management System | Nov 2024 – Present

A comprehensive work management system featuring an integrated ticketing solution that streamlines workflow from initial client requests through to project completion and end-user delivery. Handled full-stack development using WeWeb and Xano, integrated various third-party API services, and later migrated the platform to Laravel and Vue.js for improved scalability, maintainability, and long-term performance.

- Handled full-stack development using WeWeb and Xano, covering both frontend and backend implementation
- Integrated various third-party API services to ensure seamless system functionality
- Migrated the platform from a no-code environment to Laravel, improving scalability, maintainability, and overall system performance as the application grew in complexity

Stack: WeWeb, Xano, Laravel, Vue.js, MySQL

AIMS/ARMS – AILCASH Integrated Money System / AILCASH Remittance Money System | Aug 2023 – Oct 2024

Contributed to the development of two web-based remittance applications designed to facilitate seamless fund transfers for both domestic and international transactions.

- Collaborated with a team of developers to build and launch both remittance system applications
- Handled key features and functionalities required by end users in a live production environment

Stack: Laravel, Vue.js, Node.js, Tailwind CSS, MySQL

Visitor Management System | Mar 2023 – Jul 2023

Developed a web-based Visitor Management System that streamlines visitor registration, tracking, and security management. Key features include online check-ins, pre-registration, and real-time monitoring, enhancing both security and the overall visitor experience.

- Managed the system's database, ensuring optimized performance and efficiency
- Gained experience working with Git repositories and frameworks including Laravel, Vue.js, Node.js, and Tailwind CSS

Stack: Laravel, Vue.js, Node.js, Tailwind CSS, MySQL

SurvivR | Nov 2022 – Jun 2023

A thesis-developed VR simulation designed to provide comprehensive guidance and disaster preparedness for users on the essential steps before, during, and after a typhoon — aimed at enhancing safety and resilience in vulnerable communities.

- Led the development of the VR simulation as a thesis project
- Implemented interactive scenarios and real-time guidance using Unity and C#

Stack: Unity, C#, VR

Portfolio

Developed a personal portfolio to showcase career achievements and projects, hosted on GitHub. Built using HTML5, Tailwind CSS, and JavaScript to deliver a responsive and visually appealing user experience.

Stack: HTML5, Tailwind CSS, JavaScript
